Debugging the Note Taking App

Correcting in app.py :

Putting the condition statement in the function	When user write some new note, app will take **POST** action, so mention here
Change **args** to **form**	User put the string by form, so here we need to modify the **request.form**
Change the methods	App will check both **GET** and **POST** methods, so mention both methods.

Correcting in home.html :

Do mention the path	In the form tag give the app path as an action
Do mention the method	Mention the **method="POST"** which will go to the post request.
